Summary

I am a 3rd-year Software engineering student, specializing in Artificial Intelligence. I possess a good understanding of various software development principles, as well as a solid understanding of various high-level programming languages and software architectures. I also have experience in collecting, cleaning, visualizing, and modeling data with the use of tools such as Jupyter notebook(Python), etc. I also have experience developing conversation AI solutions with the use of different Python libraries and pre-trained AI models.

I possess good communication skills for working in a team and can work in SCRUM and Agile way. Looking for an internship to learn more skills in problem solving with the application of Software and AI. Also to learn to work in a real company and gain more experience and develop myself as a young professional.

Over my years of study at my current university, I have worked on some projects or have been part of a team to work on it such as:

- Student house tool(For easier and general management of the house)
- Store management app (To help managers control/organize employees and stock at the store).
- Exam planning/handling tool
- License plate recognition e.t.c
